Executive Board: Thomas Uhl, Rolf Zimmermann, Markus Klingspor

Supervisory Board: Markus Geray (Chairman), Prof. Dr. Arndt Bode, Dr. Michael D. Hoffmann

Four strong companies work together under the umbrella of Topalis AG in the interest of your success: Thinking Objects, InnoviData, Millenux and Empalis. They jointly develop solutions that are perfectly tailored to your needs. Each subsidiary company has its own special core areas of expertise in which their employees are particularly well-qualified. They all have a high level of knowledge and wide-ranging technical expertise. This collaboration is characterised by cross-topic mindsets and a regular exchange of experiences and knowledge. For the focus is not on our processes, but on yours.

You as the customer have a contact partner who knows you and is available at all times to respond to your needs and requirements. Personal relationships are important to us because we want our customers to have a true understanding of their IT and its processes. This strategy is successful – for both you and us. This is borne out by our extremely low customer and employee fluctuation rates, enabling Topalis to guarantee a high degree of knowledge continuity. Working together as a group is also advantageous in that each subsidiary has flexible access to resources. Just one more reason why we are a reliable partner.

Topalis gives you investment security, and with the independent companies additionally provides a flexible and individual service. Short channels of communication and the highest levels of expertise, as well as enjoying the work we do, are our outstanding characteristics. Around 100 employees work for the Topalis Group throughout Germany. Our customers are medium and large-sized companies from various sectors, but primarily from the energy, finance and automobile industries.

Thinking Objects

Managing Director: Markus Klingspor, Thomas Uhl, Rolf Zimmermann

Thinking Objects GmbH provides cleverly designed solutions for business critical infrastructures.

Corporate profile

If all the applications used within a company are to run reliably and be technically available, the underlying infrastructure must function properly. Thinking Objects makes sure it does just that.

Although objects are not yet able to think on their own, we add intelligence to their interactive processes. Our specialists look after the design, configuration and maintenance of your IT environment. The operation of a business critical infrastructure presents us with no problems at all, as the task you set us cannot be demanding enough.

Our service portfolio ranges from large-scale, complex system installations and integration in existing networks through to the matching security solutions. This means that you can secure your IT operations, safeguard your confidential data, and improve your business processes. You deploy a permanently available and reliable system, and you don't need to concern yourself with growing quality, flexibility and technological expertise demands. Nor do you have to worry about resources and training IT experts. We're here to look after that for you. With us, your infrastructure is in the best hands.

InnoviData

Managing Director: Thomas Uhl

InnoviData GmbH develops and integrates cutting-edge software.

Corporate profile

When is it practical to purchase new software? How long should you continue working with the old software? InnoviData makes this decision with you and puts it into practice.

Not only do we design individual solutions, we also carry on developing existing solutions so that they adapt themselves perfectly to changing processes and technical requirements. A core focal point of our software development is information systems. Whenever large volumes of data and complex data models are concerned, we get down to work, maintain and analyse the data, and interlink it in an intelligent manner.

To make sure that all applications run smoothly in your network without any media disruptions, we also assist you with system integration and care. The specialists from InnoviData look after every system, irrespective of the manufacturer and products. Our portfolio also covers open source products.

Slimline and goal-orientated development processes are hallmarks of the work we do. You as the customer are part of the team, results are discussed step by step, and you always know how things are progressing.

Millenux

Managing Director: Markus Klingspor, Thomas Uhl

Millenux GmbH designs Linux and open source solutions.

Corporate profile

With Linux and open source solutions, it is frequently possible to cut costs, reduce dependencies and enhance technical security. But this can only be done if the solutions are suitable for the company and are perfectly coordinated with its corporate processes.

Millenux provides consulting, implementation, migration and support services for Linux and open source solutions. Extremely competent employees develop a solution that is perfectly tailored to your needs, scalable and always available and secure.

We don't sell you a technical philosophy, we just develop easily applicable and perfectly matching solutions for you. The many years' experience of our specialists help them to do so. Open source solutions and enterprise software often complement themselves. We eliminate the apparent contradiction between the technical environments and unify proven structures perfectly with the world of open source with creative ideas that deviate from established ways of thinking.

The main objective is that you get the solution that exclusively meets your needs, both today and in the future.

Services
